

Garden Girl caring about compost

Garden Girl cares about compost.

Look down on the forest floor and see the life cycle of compost!
Dead leaves, sticks and animal droppings breaking down in the soil
to feed the forest of trees.

Look at where you live and see the life cycle of compost!
At a glance, food scraps, garden waste and paper breaking down
in the compost to feed the garden of plants.

Look at the food you eat and see the life cycle of compost!
Peels, skins, cores and more, breaking down in the compost to feed
the planet, not pollute in landfill.

Look at your waste and see the life cycle of compost!
Parts of plants that were once living breaking down in the compost to feed
the worms and that is just the start.

Look at where the truck takes the green bin and see the life cycle of compost!
Lawn clippings, branches, leaves, food waste... sorted, filtered, processed and
piled breaking down in the compost to feed gardens all over South Australia.

Look at your local Garden Centres SA and see the life cycle of compost!
Organic Compost in bags and in bays, potting mix and mulch, broken
down ready to dig into your soil to feed your garden in so many ways!

Look in your garden and see the life cycle of compost!
Compost added to the soil helping to grow the plants, grasses and trees,
to feed all living things, like insects, birds, bees, you and me!

This autumn care about compost, add it to your garden and keep the
life cycle of compost growing around, then try planting broccoli,
cauliflower, lettuce, spinach and more leafy greens.

If you want to grow food like Garden Girl and want to know how,
just say to yourself
....."I care about compost"

#careaboutcompost

At your local GCSA Garden Centre
you can find flower & vegetable seedlings,
seeds, mulch, plants & trees,
and especially compost!
